

Illkirch Graffenstaden, January 6, 2026

We are pleased to announce that, effective December 17, 2025, **ESARIS INDUSTRIES** and **Systèmes et Connectique du Mans (SCM)** have merged.

This strategic merge strengthens **ESARIS INDUSTRIES'** harsh-environment connectivity activities through **SCM's** strong expertise (formerly Deutsch – CKB) in product development, with 25 dedicated employees and a fully equipped testing laboratory, serving the **Energy, Railway, Aerospace, Defence, and Nuclear** markets.

With a shared vision and aligned values, our companies will offer their customers:

- **extended technical expertise,**
- **reinforced French industrial capabilities,**
- **a consolidated range of products and services,**

to address their challenges and support their projects and ambitions.

At the same time, **ESARIS INDUSTRIES** continues to implement its development plan for its **Electromechanical activities** (electrical contacts, components, and sub-assemblies), as well as for its **MOBILIS** electric power rail range.

The newly formed group will generate **consolidated revenue of €100 million**.

As part of this transaction, **Bpifrance Investissement** renews its support for **ESARIS INDUSTRIES** through the entry of the **DEFINVEST (DGA)** and **Capital Région 3** funds.

To fully deploy these expanded capabilities and maximize the benefits of this combination for our customers, **Bruno Russo** and **Frédéric Kleindienst** will serve respectively as **President** and **Chief Executive Officer** of **ESARIS INDUSTRIES** and its new subsidiary, **SCM**. They will rely on the Executive Committee to fully seize the opportunities created by this combination, in the service of the Group's customers.

Our technical and sales teams will be pleased to present this promising combination to you during your upcoming meetings.

Bruno Russo
President

Frédéric Kleindienst
Chief Executive Officer
